PRESS RELEASE WP4. FEMST Implementation Activities: A Milestone for Upskilling in STEM

During the FEMST project's lifetime, the implementation activities formed the core of its engagement with designated target groups. Participants from various target groups were brought into direct contact with the FEMST Training Package, creating significant upskilling opportunities for them.

DLSI - IPSantarém played a crucial role by providing guidelines on how the implementation process would be conducted, ensuring smooth coordination among partners.

Key Achievements of WP4

1. Successfully implemented the FEMST Training Package across all partner countries, reaching over 300 individuals in the field of STEM.
2. Delivered innovative learning methods and upskilling opportunities, enhancing the STEM learning experience.
3. Built the capacity, skills, and understanding of more than 300 participants from the project's designated target groups.
4. Provided access to the Training Package materials to at least 150 trainers and educators from partner countries in various relevant bodies, strengthening their ability to teach STEM effectively.
5. Collected and shared best practices from the implementation, paving the way for future dissemination and effective use of the FEMST Training Package.
